

Magdalen Gates School Audit and Visit Report 12.06.19

The school continues to have a focus on GDPR which is evident with the change of practice taken place across the school; key fobs introduced, including for the medical cupboards; blinds on external doors where needed and sensitive data, such as medical care plans, are no longer on display. The school does lack classroom storage however, the school makes exceptional use of electronic systems (i.e. CPOMS) and folders in classrooms display forename only. Minimal data is on display and office areas were clear and tidy. The school are currently chasing up with Pupil Asset (MIS provider) to ensure lists that are printed can be filtered to display forename only.

The school uses CPOMS for Safeguarding and InTouch as their ICT provider. The school is going to check whether the school network backups are encrypted. Actions from the previous visits have been completed or are in the process of being completed. The school has CCTV and uses an electronic signing in system.

A brief walk was completed. An afterschool walk will be completed next to allow thorough checking of folders, bins and areas where it is difficult to observe due to teachers and pupils being in classrooms.

Report type:	Visit - school audit Y2 Report 1		
School:	Magdalen Gates	Date:	12.06.19
Staff member:	Cara Fahy, (HT), J Starling (Finance), A Cooper (data protection team)	Time:	09.30
Visit checklist			
1	School walk	Action recommendations within the walks. All actions completed. 1 x file with assessment result and full name in folder that was removed during visit. After school walk still to be completed.	
2	DPE website	School can start to make use of (demonstrated during visit): • Online checklists to support compliance • Best practice areas • SAR log • Data breach log • School to decide whether to continue using GDPRiS to record breaches or make use of the DPE online log	

3	Additional policy recommendation	School to consider adopting the following documentation: Records management policy (this can be added to the website); FOI policy; Understanding parental responsibility documentation (DPE still to issue). School to download as required from the DPE website.
4	Data retention, data mapping	Record of processing tool will incorporate data retention. Suggested the school starts to identify (if not already) how they currently file name and label physical and electronic files/documentation to ensure data is kept within current recommended guidelines (destruction of data document attached). The school has already completed data mapping that can be used to support the completion of the Record of Processing for the school.
5	Technical measures	Networks, Servers, backups, cloud computing: Discussed data that is on the network. Cara is to start a data cleanse and to encourage staff to self-regulate and check folders and remove outdated information. This would also support the school when the school moves to a cloud-based solution, rather than physical servers. Note: DPE recommends that schools look to attain Cyber Essentials Plus as a documented standard to provide a level of certification of their technical measures to secure data. http://www.cyberessentials.org/ This document is the self-evaluation questionnaire for Cyber Essentials <i>Check with IT provider the encryption of the backup disk(s) – are disks encrypted? The backup disk is currently taken home daily. Initially decided that if the schools safe is fireproof and in a separate building/part of the school to the server, it would be more secure in the school, rather than being transported home daily, where there is a greater risk to the data being lost or destroyed. School to check the fire rating for the firesafe. There is a risk however that ‘all data’ could be destroyed if kept on site. Ideally the school would move to cloud back up - school to check if this is possible with current provider.</i>
6	Data cleansing and archiving data	The school will identify photos/videos stored on the system and will develop archived structure/filing system (as number 5 above). The school is also aware that there needs to be a data cleanse of the network. Suggested that for photos on mobile devices, once uploaded to the network to be deleted daily from devices (end of day routines). Example of a naming convention that could be adopted for archiving photos:

		Top level folder: School photo and video archives Sub folder: 2017-18 photo and video archive Sub level folder: Sept17-Theatre Trip You would basically create and name folders for all trips/events for that school year and add to the sub folder for that academic year. The school would need to identify current methods for uploading etc and ensure all staff understand the system. Care should be taken that it is managed appropriately to ensure only relevant photos/videos are uploaded and subsequently archived. You can then easily sort the photos to the ones you want to keep for archiving and historical purposes. This needs to be documented in your retention schedule and within your consent guidance/documentation. As students leave, the folders would be archived with limited access. For photos currently on the network you will need to complete a data cleanse and keep only the photos/videos required for archiving/historical purposes. Once completed add to the archived folder. The archived folder should have restricted access.
7	CCTV	The school has a CCTV policy. SL suggested Jill peruse the DPE documentation and CCTV best practice and check against existing policy. Notes from previous visit: 1. Check the school policy is up to date. If required, send to: dpo@dataprotection.education for review; 2. Add CCTV base unit to a secure cabinet; Identify if there is an option to limit who has access to the monitor (may not be possible as used by staff for identifying visitors).
8	Email best practice	School enquired about email best practice. Best practice guidance can be obtained from: https://c.ymcdn.com/sites/irms.site-ym.com/resource/collection/8BCEF755-0353-4F66-9877-CCDA4BFEEAC4/2016_IRMS_Toolkit_for_Schools_v5_Master.pdf (P17 – P20)
