

The Engage Trust School Audit Report

Audit Date: 18th September 2019

Auditor: Arrienne Stanyon

The Pinetree School

Each school is unique, for example, a school where the rooms are used for lettings has different risks to schools that are not. The audit walks through how data is processed, accessed and displayed to identify any areas of risk and make recommendations for your next steps.

There are several key recommendations we make to every school in order to work towards being data protection compliant-

Within administration/offices:

- Changing visitor signing in sheets to carbon copy (less PII data on display) or electronic signing in systems;
- Lockable cabinets for files such as Workforce Census;
- Automatic door locking/key fobs;
- Clear desks;
- Secure waste disposal/shredders;
- Printers with codes. Whole school:
- Banning unencrypted memory sticks;
- Training staff and communicating best practice;
- Clear desk practice around school i.e. classrooms;
- Using GDPR as an opportunity to complete whole school data cleansing and destroying outdated data;
- Updating staff code of conduct to incorporate GDPR;
- Developing data retention schedules;
- Minimising data on display, for example: lists with date of birth.

Further details for each area to inform of best practice can be obtained from the DPE Knowledge Bank and online training material.

Each school is unique, for example, a school where the rooms are used for lettings has different risks to schools that are not. The audit walks through how data is processed, accessed and displayed to identify any areas of risk and make recommendations for your next steps.

Knowledge Bank and Other Tools

Please remember to ensure the following-

- All staff are registered on the Knowledge Bank
- The appropriate members of staff have School Manager status on the Knowledge Bank
- All staff are trained, including new employees and support staff such as cleaners and caretakers

The following tools were discussed during the meeting-

- E-Learning
- SAR Log
- Breach Log
- Best Practice Library
- Best Practice Checklists
- Blog and News
- Document Management Tool
- Record of Processing

SAR and Breach Logs-

The only individuals authorised to make and view these logs are those who are School Managers on the Knowledge Bank.

All subject access request should be logged using the tools available.

All breach incidents should be logged and a member of the team will respond to let you know the correct course of action, including whether a report to the ICO is necessary, which we would make on your behalf.

Best Practice Library and Checklists-

There is a best practice library now available of the Knowledge Bank that cover various different scenarios that schools face on a daily basis. This library is continuing to grow but contains the appropriate support for that particular query. For example this may be a policy, policy statement, guidance, external documentation etc.

Associated to each best practice area is a checklist that, once completed, helps the school demonstrate compliance in a visual, simple but effective manner.

Please begin to work on these checklists as they will be discussed in future meetings.

Document Management Tool-

You are now able to upload documents, assign them to staff to be read and receive a record that they have been viewed, signed by staff or that consent has been obtained.

These documents could be a staff privacy policy, our audit report or any document the schools needs to communicate to staff members.

Record of Processing-

We discussed this upcoming tool that will available on the Knowledge Bank soon. A record of processing activity is a record of all the processing of data that the school does, who the share it with, why they process the data among many other categories of information.

This will be a long term project to demonstrate compliance and we will work with the correct people across the school to complete various sections.

Observations

Headteacher's Office

- **Personal Data on Walls**

Pupil analysis and full data sims print out was located on the wall. The Headteacher removed this during the meeting. This type of data should not be on permanent display. Please ensure it is securely stored with access only given to those who need it.

School Office

- **Printing Left Unattended**

Consider using key coded access, a fob or password system in order to access the printing. A risk occurs when confidential information prints automatically in a shared office as unauthorised access could occur. This may also have cost benefits.

Conclusion

The school have a secure day-to-day environment which aids the protection of personal data. The classrooms contain very little personal data and are locked when not in use. The staff are aware of data protection requirements and displayed a positive attitude towards any changes suggested.

Next steps-

- Establish working practices and procedures for data protection with the Trust so that staff are aware of how to report breaches and subject access requests
- Ensure all members of staff are trained
- Give Knowledge Bank access to key members of staff
