

Lion Academy Trust Audit Report

Audit Date: 8th October 2019

Auditor: Arrienne Stanyon

Thomas Gamuel Primary School

Audit Review

All recommendations from the previous audit have been actioned. This includes-

- Availability of personal data within classrooms
- A lock has been placed on the SLT office door
- Staff consent has been obtained (remember for the future that consent must be opt-in and not opt-out)
- Reception area has been reviewed and all personal data stored more securely

Best Practice Checklists

The Best Practice Checklists are available on the Knowledge Bank and can be useful for many different purposes.

Each area contains either a guidance document, model policy or template that can be useful. Associated to each area is a checklist which comprises of a series of questions in relation to the particular area. These will help to direct the school as to what they should be doing in each area as far as personal data is concerned and it forms parts of the next steps for GDPR compliance.

The checklists can be printed and shared with other members of staff or governing bodies in order to track improvements.

Most importantly they will be used to focus future DPE visits so that the Data Protection Officer can be most of use and provide additional support and guidance.

Please endeavour to complete some areas before the next visit.

Training

We discussed training options at the meeting and it was explained that all members of staff need to be data protection trained and the training should be revisited annually.

Additional training resources will be going live later in the year. These short modules (5-10minutes) will include:

- Subject Access Request
- Personal Data Breaches
- Information Security
 - Clear Desk
 - Physical Security
 - Data Classification
 - Password Security

Sector Learning

Common observations and recommendations for avoiding breaches and time-consuming errors were discussed. Among the areas discussed were-

- Use of emails- communicate to staff the need for email organisation to avoid time consuming subject access requests
- Consider email retention periods
- Remind staff to be professional in any written communications
- Communication- a lot of SAR's arise from disagreements and may be avoided if the school are able to be transparent before a SAR is received
- Encourage staff to share near breaches or accidents that result in a breach so that others may be aware of them in the future

Record of Processing

The Record of Processing Activity Tool is a record of all the processing of data that the school does, who they share it with, why they process the data among many other categories of information. It is a legal requirement under GDPR to complete.

The tool is now live and available on the Knowledge Bank to be accessed by all school managers.

The first step is to begin populating the master lists available in the tool-

- Software
- Hardware
- Roles
- Third parties

Behind Reception

- **CCTV: Live Monitoring**

Consider adding a reflective film to the window to prevent external viewing of the CCTV screen

Classroom 1

Early years

- **Computer Logged in and Unattended**

Email account open and accessible

Leave it! Lock It! No data should be accessible to unauthorised persons. Habit and thinking of always securing data is more important than reliance on a technical solution. Prompt staff to lock computers whenever they are not in use. Don't store password in the browser of a shared computer (where device log on is shared). Ensure password protection, encryption, anti-virus and malware protection in place on all computers.

<https://kb.dataprotection.education/index.php/documents/drip-feeds/19-leave-it-lock-it-computer>

- **Personal Data on Walls**

The SIMS print out for the fire register currently contains date of birth which is unnecessary for this purpose. Remove this data category from the printout.
