

School Visit Report

Audit Date: 16/01/20

Report: Year 2 visit 1

DPE: Stuart Lee

School member: Paula Daynes

1. Visit details

Lodge Lane Infant School is a midsized Infant school with a nominal roll of approximately 220. The school are part of the Wensum Trust.

An audit walk was arranged with the Trust and completed with the administrator Paula Daynes. During the visit, as well as being briefed by Paula I was able to talk to the headteacher and class teachers. It was evident that staff were aware of their GDPR responsibilities and good GDPR practice was observed; forename only used for books lists and displays; classrooms were orderly with minimum data on display; offices were well organised, tidy and online systems are starting to be optimised for accessing PII data. Staff spoken to were also aware of data breach reporting requirements.

The DPE best practice guide was handed out and it was suggested this be displayed in the staffroom: <https://kb.dataprotection.education/best-practice-library/documents/drip-feeds/20-how-do-you-keep-your-data>

Kalina (DPE) completed a remote session on: 21/01/20 demonstrating the DPE website, how to import staff from csv file, locating manager reports, posters and ticket system.

Audit walk findings

The school has an inhouse cleaner and caretaker. The school is used for lettings in the evenings.

The school uses forename only for lists, displays and photos. The school have photos and student forename displayed from the reception area, corridors and classrooms. Displays ranged from student council, birthday displays and star of the week awards. Where photos are displayed with student forename, the school confirmed this matches the consent the school has obtained. Audit walk findings are detailed below:

Visitor signing in system

The school uses Inventory as its confidential visitor signing in system.

Front office

Staff were proactive in their GDPR compliance. Areas were tidy and the office had key code entry and secure storage.

Office staff – maintaining password security

Discussed the risks around maintaining password books and keeping information secure.

Action point:

- SL to follow up with CE regarding best practice across the Trust i.e. password managers/secure online systems.

Classrooms

Not all classrooms had secure storage. All staff spoken to have a good awareness of GDPR and what was and was not sensitive data. Some classrooms had an assessment folder on shelves that contained full names with assessment data; 1 x classroom SEND folder (Pearl class) was observed with clinical and educational psychologist reports within, in addition to other sensitive data.

Action points:

- Determine if physical folders are still needed, if so, ensure sensitive data is secured;
- Review data in folders and use as an opportunity to complete a data cleanse (aligning with retention schedule);
- Explore the use of MIS/secure online systems for sharing sensitive data securely.

Photocopier room

The photocopier room contained secure cabinets where sensitive data was kept. The key is kept in the same room and also included the key to medical information/equipment. **Advisory:** purchase mini keycode key safe to add keys to.

Headteachers office

Discussed ensuring PC was locked when left unattended and the type of sensitive data that could be on the screen if the PC was left unlocked.

Advisory:

- Purchase keycode pad (same as front office) to limit access and minimise risks when not present.

Staffroom

Care plans in folders, positioned behind another sleeved folder; allergy/medical details with student forename and photos and 1 x outdated full medical NHS care plan on display. 2 x printed allergy lists with photos. **Note:** Removed during visit as ascertained these were not needed.

Advisory:

- Do photos need to be displayed? If so, can additional information be minimised i.e. forename only? Can the medical information be added to the folder – school to review.
- The school can minimise risks (i.e. accidental access when used for lettings) by adding key code entry (same as front office).

Technical measures

Discussed with office staff iPad/Tablet security. Are all laptops encrypted, does your end of day routines include housekeeping to remove data no longer needed and is equipment secured? DPE recommends schools develop procedures to ensure iPads can be accounted for daily and data (i.e. photos) can be cleared if lost or stolen ([Erase your device](#)).
