

The Spring Partnership Trust School Audit Report

Audit Date: 14th January 2020

Auditor: Arrienne Stanyon

Midfield Primary School

Overview

The new member of staff responsible for data protection is due to leave the post imminently with a replacement not yet found which resulted in little progress being possible during this meeting. Some areas of compliance we discussed which have been detailed in this report.

Best Practice Checklists

The Best Practice Checklists are available on the Knowledge Bank and can be useful for many different purposes.

Each area contains either a guidance document, model policy or template that can be useful. Associated to each area is a checklist which comprises of a series of questions in relation to the particular area. These will help to direct the school as to what they should be doing in each area as far as personal data is concerned and it forms parts of the next steps for GDPR compliance.

The checklists can be printed and shared with other members of staff or governing bodies in order to track improvements.

Most importantly they will be used to focus future DPE visits so that the Data Protection Officer can be most of use and provide additional support and guidance.

Please endeavour to complete some areas before the next visit.

Training

We discussed training at the meeting, and it was explained that all members of staff need to be data protection trained and the training should be revisited annually.

The school have some staff who have successfully completed online training modules on the Knowledge Bank but need to ensure this covers all members of staff, with a completion rate of at least 90%.

Additional training resources are now live. These short modules (5-10minutes) include:

- Subject Access Request
- Personal Data Breaches
- Information Security
 - Clear Desk
 - Physical Security
 - Data Classification
 - Password Security

These modules can be used as a refresher training by members of staff who commit a breach or by staff who have completed their Year 1 data protection training as it provides different advice and adds to their current data protection knowledge.

Subject Access Request and Breach Review

Breaches-

The school have 0 breaches on the Knowledge Bank.

All breaches within the school, regardless of their severity, should be logged.

Additionally, it is crucial to ensure staff are trained to recognise breaches and understand who to inform and where the access the breach procedure.

Subject Access Requests-

The school currently do not have any SAR's logged on the Knowledge Bank. Please ensure all members of staff are aware of how to recognise a SAR and of the next steps to take so that all requests can be dealt with promptly and in compliance with data protection laws.

Observations

- **Talk Through Audit 1 Report and What Has/Not Been Actioned**
 - Training- this should be rolled out to 100% of staff members
 - iPads awareness is good not consistent- all staff should be aware of how to use the iPads and where to store them
 - The medical data has been removed
 - Other data has been reviewed and tidied

Recommendations

- Ensure the new member of staff is aware of their responsibilities regarding data protection and the progress the school has made to date
- Training is essential- staff should be given a timeline to complete it by
- Complete some of the best practice checklists prior to the next visit
