
School Audit Report

Audit Date: 27 February 2020

Auditor: James England

Whirley Primary School

Reception

- Staff and student photos on display

Ensure best practice and don't display photos with names. Ensure consent has been granted for display in public areas

Staffroom

- First Aid / Accident book located containing records.

HSE recommends that each log should be on a separate piece of paper and securely stored once completed. Whilst there is a good reason for shared and easy access to the First Aid book, it doesn't extend to shared and easy access to all the data it contains, which should be restricted and maintained by authorised staff.

Headteacher's office

- Door unlocked, office unattended

Loft

- Archive file store

Archived files need the same organisation as unarchived files. There needs to be an understanding of what is stored, where and for how long (to ensure timely destruction).

In addition to appropriate records identification and management, data should be secured as per the unarchived classification level.

Findings

No major issues, other than a reminder to ALL staff that data should be secured at all times. That includes computers, offices, archives and shared resources such as the First Aid book.
