- Confidential waste bags - ensure they are kept secure at all times. Secure bins are a preferred option

SEND Office

- Computer unlocked, logged in and unattended
- PARS application open

Staffroom

- Classroom keys unattended and unsecured
- Year 11 student photos on display

Art room

- PARS - displayed on the screen. Staff machines should not be projecting when showing any management information, including emails
- Office: computer unlocked, logged in and unattended
- Office: 2 x CVs on desk, unsecured

Learning Resource Centre

- Computer unlocked, logged in and unattended
- Coverslips left unsecured on top of cabinet
- Printed emails left unsecured on top of cabinet

VI Form

- Front door open - poor physical security
- Confidential waste bag within reach of counter

VI Form Office

- Door unlocked, office unattended
- Student files accessible in unlocked cupboards

VI Form corridors

- "Believe in Success" photographs on display accompanied by first name, last name

Findings

No major issues, other than the lack of secured data on numerous occasions, which suggests that data security is neither inherent nor persistent throughout the staff.

Actions:

- Staff training should be undertaken with regular reminders and use of best practice from leadership.
- DPE to liaise on TASC software data mapping and best practice

Key messages:

- Leave it! Lock It! No data should be accessible to unauthorised persons. Habit and thinking of always securing data are more important than reliance on a technical solution.
- Prompt staff to lock computers whenever they are not in use.
- Don't store the password in the browser of a shared computer (where device log on is shared).
- Ensure password protection, encryption, anti-virus and malware protection in place on all computers.
- Never use a class computer for administrative tasks whilst the screen is being shared with a projector.
- Lock offices that contain private and confidential materials when not in use.
- In shared offices secure your data that other staff aren't authorised to view.
- Keep confidential waste bags what they are - confidential. They should be as secure as the documents they contain if they weren't waste, not open in the office corner.
- Photos on display: use data minimisation principles. How much data is required for the purpose? Photo alone? Photo + first name? Photo + first name + last initial? Only use the minimum you need.
