**Poringland Primary School****Audit Date: 20/01/21****Report: Remote consultation****DPE: Stuart Lee****School member: Pete Dean, Matt Walker, Jo Francis**

---

## Consultation details

The school had already worked through and actioned recommendations from previous visits which was confirmed when speaking to Matt and Jo during the previous November 2020 remote consultation. The best practice areas were revisited, and the school can continue to make best use of the resources available. The school confirmed:

- The school's publication scheme has been updated
- Policies and Privacy Notice updated for COVID related sections
- Completing the process of a whole school data cleanse (retention schedule sent to Matt in November), including outside specialists to allow for bulk shredding
- Online training continues to be completed and followed up on

In addition, the school continue to utilise cloud based (Google) solutions for PII data and remote learning. The school were directed to the latest news and remote working protocols but have already actioned and have their own documentation in place.

The focus of the January visit was to update the school to any new developments since the last consultation and give an overview of the record of processing and decide on the best approach for the school to take ownership and tailor specifically for the organisation.

## 1. New developments

### Online audit walk template and Privacy Notices

1.1 As it was not possible to complete an onsite audit it was suggested the school could complete an after-school walk and use the quick reference sheet which demonstrates best practice that can be followed: <https://kb.dataprotection.education/best-practice-library/documents/drip-feeds/57-dpe-quick-reference-guide>

**DPE will shortly provide an electronic version for the audit walk that the school can make use of. This was demonstrated during the visit.**

1.2. There is a new Transparency area with individual **Privacy Notices and a child friendly version**. The school can adopt the child friendly version straight away and might also want to consider when refreshing the Privacy Notices updating to the latest versions: <https://dataprotection.education/index.php/best-practice-library/best-practice/transparency>

## 2. Record of Processing (RoP)

The RoP is an ongoing project that will take time to complete. It is hoped that not only will the RoP satisfy compliance requirements, the RoP manager can be used for school improvement and risk management (DPIAs), especially when introducing new technologies. Supporting information can be located from: <https://dataprotection.education/news-top/news/94-siteupdates/175-record-of-processing-rop-supporting-information>

SL had mapped a number of key processes across that the school can now start to make use of. This will be an ongoing process as the RoP is updated and new technologies and processes are recorded. On discussion the school will start to complete in stages:

- Matt to look at and tailor one RoP initially and email SL to have a review once completed (actioned)
- Matt and Pete to start to identify the most useful/relevant RoPs and look at how these can be tailored and benefit the school
- SL to support the process – if there is an RoP that the school would like and is not in the generic processes Matt will work with SL to get these populated

**Future developments**

- Third party software, hardware and software to be populated within each RoP
- DPE to provide additional reporting to allow risk assessment and process flow visualisation.
- New user-friendly interface
- Additional reporting filters
