

School: St William's Primary

Date: 13 October 2021

Report: Onsite after school walk

DPE: Stuart Lee

School member: Mark Bloomfield

School Audit Walk

General observation

There was good data protection practice observed throughout the school; minimal data on display; lists predominantly forename only; photocopiers have keycode access; MB confirmed that the school now utilises the Cloud and MIS system rather than using physical folders. The school and MB take a positive approach to GDPR compliance.

Each school is unique, for example, a school where the rooms are used for lettings has different risks to schools that are not. The audit walk aims to support the school in identifying the main risks to personal data. Details and actions/considerations are detailed below:

Signing in system and visitor entrance

There is secure entry to the premises and an electronic visitor signing in system is used.

Actions: School to add a statement to the electronic signing in system regarding where visitors can obtain the latest general privacy notice from i.e. the school website.

Note: Staff still currently sign in on paper. MB is identifying if the school can move to electronic signing in for staff (H&S etc).

External exits/fire exits

Due to COVID guidelines and ventilation, external doors were observed wedged open.

Actions: Review end of day security i.e. open external doors with laptops visible.

Lists and displays

School applies best practice regarding displaying photos and lists:

- Photos without name;
- Photo with forename (in contained areas);
- Photo and name with explicit consent for general display;
- Forename only class/lists and displays

Within administration/offices:

Good practice observed in the front administrative office:

- Lockable cabinets for files such as Workforce Census;
- Automatic door locking/key fobs;
- Clear desks;
- Secure waste disposal/shredders;
- Minimal data on display

SEND and leadership team offices

As these offices are within an area used by extended services and because of the sensitivity of data that will be in these offices, it is recommended that the following is considered:

Keycode access to the SEND office (no lock at present). The remaining leadership team offices had locks although it is still worth considering changing to key code entry.

Continue to be vigilant to any sensitive data within in-trays.

Deputies office:

- Consider changing the process for displaying the 'Safeguarding folder'. The folder is currently displayed on a wall.
- Consider purchasing a mini key safe to add the key to the cupboard within the office. During the visit the key was placed within the Safeguarding folder.
- Check folders that are currently on display for outdated/sensitive information and add folders to the secure cupboard.

Intervention room

Although I would not have known which system could be accessed, a UN and PW was observed by MB.

Action: Reminder to staff not to write UN and PWs on whiteboards.

Staffroom

Accident book observed on open shelf unit.

Action: MB to review the best process for storing whilst ensuring the accident book is accessible.

Classrooms - information security - laptops and iPads

Minimal data on display. School utilises cloud based systems for sharing and accessing data.

2 x unlocked laptops and 1 x iPad without a secure code.

Actions:

Reminder to staff to ensure laptops are locked when not in their work area.

MB to add secure code to the iPad.

Library

Laptops are currently stored in this area. MB is reviewing if this was the best area to store laptops.
