

Organisation: Clarion Academy Trust

Date: 14/03/2022

Report: Record of Processing - Online Meeting

DPE: Linda Mortimer

Trust member: Lorraine Crabb, Trust HR Manager

Consultation details

- Overview of the organisation's requirement to comply with Article 30 of the GDPR
- How personal information is mapped using DPE's RoP tool
- Example of generic HR RoPs
- Reporting functions of the RoP

An explanation was provided regarding a Data Controller's responsibilities under Article 30 of the GDPR. Article 30 states that Data Controllers must map how they safeguard personal data ie the category of data being processed, the source of the data, how it is received, who it is shared with, who also has access as a third party and the designation of that third party, how it is retained and when it is securely disposed of.

This is known as a Record of Processing (RoP) and also needs to detail the trust's technical and organisational measures, so in other words the policies and procedures that are in place to safeguard the data.

The RoP also notes the Lawful Basis for the processing of personal data and the Data Subject's rights. This information is completed by the DPE team.

In completing the RoP the trust will be able to demonstrate its compliance with the GDPR, working in accordance with its own policies and procedures as well as government guidelines as noted in the Academies Financial Handbook, Accounts Direction and other key policies.

Reporting Functions of the RoP

At the time of this meeting Lorraine was shown how to produce individual risk reports which can be generated for each task recorded in the RoP. This can be achieved by going to the 'select document ' (box at the side of each RoP), and then selecting 'process risk report'. This information can be copied into a Word document.

A Retention Schedule is also available and can be produced by accessing the main Dashboard / select My Activities / go to Generated Documents.

Record of Processing (RoP) - methodology and where we are at

We will work with you and demonstrate how the RoP can be adapted to reflect your trust's individual practice.

Step 1 - a general introduction to the RoP tool with a brief overview of the generic process relating to HR management at a local level at Clarion Academy Trust – this was completed at the time of the meeting on 14.03.22.

Step 2 – online workshops and group sessions will be available, to support schools with further individual sessions as needed.

RoP Management

Using a risk-based approach a number of generic RoPs were copied into Clarion's RoP Manager area on Knowledge Bank. At the time of the meeting example generic HR RoPs were reviewed. Lorraine will continue tailoring the remaining RoPs currently in the school's RoP Manager on Knowledge Bank.

It is worth noting that there is no set timescale for completing the RoPs. However in the event of a serious data breach the ICO may ask to see the school's Record of Processing, and in completing the RoPs already assigned to the trust, Clarion will be able to demonstrate its compliance with the GDPR in these specific areas.
