

School: Cringleford

Date: 09/03/2022

Report: Onsite consultation/audit walk

DPE: Stuart Lee

Staff member: Julia Humphrey

An onsite visit was arranged with JH to complete an after school audit walk.

The school has been utilising Cloud solutions resulting in less physical data in folders and on display. Risks for unauthorised access to data was discussed; external personnel; cleaners; extended services; contractors and parent helpers. The school has a high intake of EAL and also have looked after children onroll. Below are the observations and follow up actions from the walk:

1. CCTV

Observations: CCTV is positioned in the front car park, entrance and rear to the school.

Actions: SL to work with the school (summer term) to complete the following:

- Review of CCTV policy.
- Update signage.
- DPIA of current system; access logs, positioning of cameras and data retention.

Note: The caretaker currently manages the CCTV system. The CCTV system is managed internally by the school. CCTV is not positioned in privacy invasive areas i.e. toilets.

2. Signing in system

Observations: Open book system used with multiple books in operation.

Actions:

- Move to a closed book system.
- Separate the visitor signing in system from the parents signing in. Reason: parents could inadvertently view names and reasons for visit i.e. ed psych and child they are visiting.
- School to start the process of identifying a suitable electronic system to move to. Suggested Mulbarton as a school with a good electronic visitor signing in system.

3. Classrooms

Observations:

Grab sheet for fire evacuation and lunch information displayed with full name near exits.

Some lists contained full names and some lists displayed forename only.

Folders in classrooms with sensitive data.

1 x unlocked laptop.

1 x classroom where keys were left in the cupboard and folder with passwords was accessed.

Actions:

- Turn the fire evacuation grab sheets to face the wall and have a front cover label i.e. Fire list.
- School to check that all laptops have passwords (IT Lead) and are encrypted.
- Reminder to staff to use: Window + L to lock laptops when not at their work area.
- Reminder to staff to secure cupboards with sensitive data.
- If using full name for lists, reminder not to leave on display and use electronic and/or folder systems

4. Corridors and open areas

Observations: Care plans/allergy information and medical book on open display within the KS1 medical area
Coat pegs contained forename and photo in open areas.

Actions:

- Assess risks and consider moving to a folder system that can be displayed during the day and moved to a cupboard at the end of the school day. Any new process should be documented and communicated to staff to mitigate any risk to the health and safety of students.
- Review current consent forms and refresh for September. If keeping with the current system (photo and name in open areas) SL suggested consent to be the best option.

5. Notice boards

Observations: Various information was on display; PP lists; assessment data allergy and dietary information.

Actions:

- Move to a folder system.
- Reminder to staff not to use notice boards for displaying sensitive data.
- Reminder to staff to secure sensitive data at the end of the school day.

6. Medical Room

Observation: Asthma list on wall.

Action: review and consider the use of a folder system.

7. Photocopier

Observation: The photocopier in the corridor does not have a secure printing option (used for the printing of sensitive data).

Actions: School will be renewing shortly and will move to a secure printing system.
