

Data Protection Education (DPE) GDPR Audit walk report June 2022

DPE lead consultant and author: Stuart Lee

School lead and DPE contact: Louise Robinson (headteacher)

Introduction

The latest governor report is written from information obtained from remote consultations, action plan and the audit walk. The report provides a progress update for actions completed since the previous governor report of December 2021 and additional follow up recommendations from the latest audit walk.

Leadership compliance documents and training

LR has been implementing recommendations made from the previous audit walk.

There is a dedicated GDPR section on the school website and the school has the latest DPE GDPR documentation listed:

- GDPR policy
- Privacy Notice for pupils, workforce and general public (i.e. visitors)
- Data breach procedure
- SAR procedure
- Third party supplier list

Staff have completed various e-learning training. LR uses the audit walks findings to improve practice and communicates best practice and audit walk findings back to staff.

Audit walk June 2022

LR had compiled a checklist action plan and had completed, or was in the process of completing the actions listed in the previous report. Feedback is detailed below:

The entrance and reception is clear and tidy and the visitor sign in system now has a statement added to inform visitors that the general privacy notice can be obtained from the GDPR section of the school website. The front office was clear and tidy.

Consent for staff photos on display in the foyer/reception area has been sought.

Photocopiers now have secure codes added.

The head teachers office (where safeguarding data is stored) now has key code entry as does the deputy/finance, PPA room and front office. A reshuffle has taken place in the deputy/finance office with additional space made in the secure filing cabinet for the finance officer to add their intray to. There had been a declutter of outdated information completed and sensitive data added to secure storage. Auto lock has been added to the desktop/laptop.

Classrooms no longer display sensitive data on the back of cupboard doors and folder systems have been developed. Minimal data was on display and in-trays checked had no sensitive data within them.

The following observations and feedback has been provided regarding information observed and improved processes for the second audit walk:

Staffroom

Observations: 1 x absence form observed.

Feedback and considerations: Absence forms to be stapled and placed in reverse to pigeon holes to avoid unauthorised viewing of information.

Medical lists are kept in the staffroom. Although covered - is there a better way of communicating/storing/accessing i.e. utilising online systems - school has reviewed and will continue with the current system, although will consider whether the staffroom would benefit from key code access.

Classrooms

Observations: Classrooms had minimal data on display and good practice observed.

1 x sports day (day previous) with abilities on display (forename only).

PPA office

Observations: Positive outcome. Key code entry now in place. No data was accessible and cabinets were locked.

Kitchen

Observations: Notice boards are used to display sensitive data and outdated information observed. Most information had front covers with 1 x photo, name and allergy information on open display.

Feedback and considerations: LR to review. Consider developing a folder system and reminder to staff. Note: Some schools seek consent/discuss with parents where there is a serious medical condition as to information to be displayed.

Clubroom

Observations: 1 x sign in book/handover book and 1 x medical administer sheet with medical information (turned over).

Feedback and considerations: Reminder to staff to store securely and not leave on open display.

Group room

1 x parent helper book out on open display.

Feedback and considerations: Reminder to parents/staff to place in suitable storage.

Solution to current key code and layered access:

Observations: Multiple key codes were used for the new key code locks which impeded on daily routines.

Feedback and considerations: A solution would be access at 2 levels to minimise the amount of codes i.e. 1 x code for LT/finance and 1 x code for all staff for other areas. A hindrance for LR was that staff can not hand information to her, or add to the office as this is locked. A box file will now be placed in the front office that staff will be able to add information to.
