Hi Steve/Maurice,

Thanks for organising the training yesterday - I hope everyone got something from it. I had some follow up points for you that we should probably discuss at some point:

- We met Connie, one of your governors, at Stocklake Park, who seemed keen to be more involved with data protection, so wondered if you would like me to set her up on the Knowledgebank? I could also arrange for a demonstration for her and any other members of staff?
- The above also leads me on to ask what your plans are for adding staff onto the Knowledgebank? While we understand that staff get their data protection training from another platform, there are other advantages from having staff on the portal. It was also talked about a lot at the training yesterday. I am also aware that we are due to have a mid-year report in February of where the Vale Federation is regarding data protection, and there is very little data in the Knowledgebank for this currently, adding more people will create more data which can be used for reporting.
- James asked the question of both audiences how many people had never had data protection training and quite a number of hands went up, especially at Stocklake Park, so just making you aware of this as I'm sure you had advised that data protection training was part of the onboarding process.
- We would also advise that all training (including yesterdays) is recorded for individuals because this is one of the things the ICO would check should there be a complaint or an escalated data breach reported to the ICO.
- I would advise adding PIN codes to the printing as this came up in both sessions. Not only is it important for data protection purposes it can save a lot of money on paper and toner.
- Password changing came up yesterday as well - there are quite a few people who have never changed their password, not changed it in a very long time, or have the same password for all systems - I would advise putting something in place with IT that ensures the password is changed at least once a year as a minimum and enforces the criteria for a complex password. In the case of email, multi factor authentication is recommended by the NCSC.
- Paper documents going off site was a question - this was in relation to medical information and so special category info going off site as a requirement and how this could be done securely. We would advise taking the minimal amount of required information (i.e. not the whole document) and ensure that the member of staff signs the document out and back in again on return. It might also be advisable to have a specific type of folder for this to make it easily identifiable by any member of staff and to keep the information hidden while offsite. It is advisable to shred that information after it is signed back in. Given the nature of the school, this is perhaps something to add to any policy or procedure relating to off site visits?
- The question around full names and photos on the wall came up and James advised that the person needs to be mindful of what the reason is for putting up any information and if it is necessary. This infographic covers this and some of the other questions so might be a useful resource for you to make available to staff as it gives good practical guidance for staff:
<https://dataprotection.education/best-practice-library/documents/drip-feeds/57-dpe-quick-reference-guide>
- I would also like to arrange an online meeting with you and Victoria, our legal director, to discuss the agreement that you sent through to us and the options available. James did mention it briefly to Maurice yesterday. We have the following dates available for a half an hour meeting:

Tuesday 17th January @ 1:30pm
Monday 23rd January @ 1:30pm
or
Wednesday 25th January @ 10am

If none of those days suit then please let me know and I can come back and offer some days in February.

I look forward to hearing from you,

Many thanks,

Tammy Buchanan
