

School: Poringland Primary School

Date: 02/11/22 and 23/11/22

Report: Onsite and remote consultation

DPE: Stuart Lee

Staff member: Peter Dean and Hannah Howard

Meeting and remote session details:

The onsite meeting supported reestablishing data protection priorities for the school. A follow up remote session with HH was arranged (23/11./22) to demonstrate the DPE website, including: recording a data breach/SAR; updating staff lists; to do lists; assigning staff to courses and the redaction tool. Follow up actions are detailed below:

1. Compliance documents

SL recommended that the school updates to the latest DPE data protection policy and privacy notices and display the schools third party list as a separate document on the data protection section of the school website. The latest DPE documents are available from the following [DPE best practice area](#). **To save the school time, SL offered to share the main documents with academy information removed.**

A school to check against compliance layout is:
<https://www.trowseprimaryschool.co.uk/key-information/gdpr>

2. Information security and staff training

2a. NCC thematic cyber security audit

Information security - PD confirmed that they have perused the NCC themed cyber security audit and have asked the schools IT provider to go through the audit and have started to formulate an action plan.

There is also an [information security best practice](#) area that the school was signposted to with information security policy documentation, links to other related best practice areas (passwords) and lots of content regarding latest threats in the sector.

Other useful documents to review and check that you have linked to information security are:

- Work away from school policy
- Information Security/Passwords

The school can also make use of the NCSC website for resources:
<https://www.ncsc.gov.uk/section/education-skills/schools>

2b. Staff training

The school will set up staff to complete **An Introduction to GDPR and the Stay Safe Online NCSC training**. This is not only beneficial for the organisation but also for staff when accessing personal information online i.e. personal banking:

<https://dataprotection.education/courses-heading/stay-safe-online-ncsc>

The guide for assigning staff to course and sending a 'to-do' email is detailed here: <https://dataprotection.education/news-top/news/165-using-the-knowledge-bank/291-assigning-users-to-courses>

3. Audit walk findings - raising staff awareness

PD/HH to peruse and action the Making the Rounds audit walk findings (April 22). To view the log: dataprotection.education/courses-heading/making-the-rounds-log/add-log?id=82319

Summary of findings is detailed below:

DPO feedback

The school is progressing towards utilising cloud solutions for sharing data securely and now also uses software (provision map) for SEND data.

The school has contract cleaners and is used by extended services (slimming world).

Entrance/reception

Consider a review of security for the main school entrance when used by extended services. SL's afterschool visit enabled unchecked entry to the school premises, including the front office. Is there a solution to allow members of the public to enter without impacting the security/safety of staff/premises? Can other areas of the school be secured to restrict access to just where it is needed? Could a signing in system be used by the provider and then site access restricted once members are present? This is not an easy one to resolve but is worth reviewing!

As the general public has access to different areas of the school, ensure areas, where there is sensitive data, are secured i.e. lock the front office, cabinets, and areas where there is sensitive data.

Review staff signing in process as an open book system is used. If keeping to paper systems ensure a closed book system is in operation. Suggested Mulbarton as a good example of a school that has implemented an electronic solution.

Classrooms

Review how data is displayed and stored in classrooms. Different systems are used in different classrooms, for example, back of doors, wall cabinets, and folder systems are used to display sensitive data. Some classrooms used forenames only and some classrooms had full names. Would it be better to have a folder/electronic system for consistency and security of data?

You may have high-risk students for whom you have assessed the risks and for health and safety have made the decision to have sensitive information on display on the back of cupboard doors. However, in general, the back of cupboard doors would not be used for displaying sensitive data. School to review.

Medical room

The medical book was left open and on display. School to review whether the folder should be moved to the front office at the end of the school day and/or operate a closed book system and place the folder into storage at the end of the school day. Could key code entry - similar to the front office be used to secure the area?

Raising staff awareness

Use staff meetings and briefings to raise staff awareness regarding good data protection practices.

4. Future meetings - next steps

- Publication scheme
- Data retention
- Supplier due diligence
