To: Caroline Lee <admin@trumps-green.surrey.sch.uk>

Bcc: Tammy Buchanan <tammy.buchanan@dataprotection.education>

Hi Caroline,

Thanks for your time today and please thank Mark as well. Please find below the information we discussed:

- Password Policy with complex passwords - yes (for the network)
- Multi factor authentication - recommended for email (while not prompting while on the school network or on a school device)
- Account Lockout - recommended after 3-5 attempts
- Password deny - yes
- Supply teacher logins - not needed as all supply teachers already have logins used from a bank of staff
- Non-shared passwords - discussion over mailboxes such as office@ - would recommend these are shared mailboxes so those that need access to it have their own login rather than a shared one
- Passwords written down - would encourage staff not to write down passwords. There are some drip feed posters on the Knowledgebank : <https://dataprotection.education/best-practice-library/documents/drip-feeds/23-keep-it-strong-keep-it-long>
- Admin accounts for the server - this is currently only held by SoftEgg. Advise that the school need a copy of it so would recommend keeping a copy in the school safe
- MIS Admin - there is an admin for this in school
- IT Asset Record - held with SoftEgg and in school
- Loaning of equipment - staff have a loan form
- iPads - use of a mobile device management system might be considered to manage and track lost equipment. Ensure iPads have a PIN
- Laptops - use BitLocker encryption
- Software updates - run daily using WSUS and no Windows 8.1 machines
- Wi-Fi - no guest Wi-Fi as the password is not asked for. Password needs to be secure
- Server Storage - server is stored in the art room which is a locked cupboard but could be considered a risk as the key to the room is accessible by all staff and hence so is the server. The server could be switched off or accidentally damaged and so there would be no network/internet access in the school.
- USB's - policy of no USB's in school but this is not physically or electronically checked. Sophos, which the school uses, does allow endpoint checking of USB's while allowing iPads etc.
- Printers - PIN coded
- Email Retention - advise ensuring staff are removed from email as soon as they have left and consider adding retention policies for both Deleted and Sent mailboxes across the school as an organisational policy from 365 Admin. Consider what might be required should a subject access request be put in.
- Network file/folder retention - advise checking at least annually common areas of the network such as 'Staff Shared' to housekeep what is no longer required. Advise staff not to copy folders that already exist or upload folders from previous schools worked in - a head teacher was fined by the ICO for doing this: <https://www.kelsi.org.uk/news-and-events/news/primary/ico-warns-schools-after-headteacher-fined-for-unlawfully-obtaining-pupils-personal-data>. Remove photos and videos at the end of each academic year. Clear all photos from iPads, especially of children annually.
- There is no CCTV on site

You advised me that you are leaving in a few weeks so we could not book another meeting. But you will put the next person in touch with me and I will organise an online meeting with them. Good luck with what you are doing next!

Many thanks,

Tammy Buchanan
