Hi Abi,

Apologies for not getting back to you sooner.

What if type scenarios -

- If there is a display on the wall with first names only and details about the child, then on the other side of the room photos of the child and name, the two pieces of info could be joined up and connect and be a risk to the individual.
- While first names with a photo seem rather innocuous, it can actually be quite damaging if placed near an exit and other adults see it. They are then able to approach a child and speak to them with their first name, which can be perceived as friendly by the child and as though they are known to the adult, with the possibility of leaving with the child.
- 'Schools won't have Cyber attacks' - 12 schools were attacked in the UK at the end of last year through the hackers just logging onto the MIS through guessed usernames and passwords: <https://dataprotection.education/infosec/301-vice-society-ransomware-attacks-on-schools>
- If a data breach occurs (over 80% we see with schools is through emailing the wrong person), and then a complaint is made to the ICO, then the first thing they will ask is if all staff have had training.
- USB sticks - a head teacher moved from one school to another and copied all files from one of the network drives. He then uploaded them to the network in his new school. That information contained children's data: <https://www.forbessolicitors.co.uk/news/45012/head-teacher-fined-for-breach-of-dpa>
- Phishing emails. An HR manager of a Trust received an email from the CEO of the Trust saying that her bank account had changed. The HR Manager emailed back and asked for details of the account. The salary was paid into the new account. The CEO didn't query her salary for four days. Only when they actually spoke did they realise they had been scammed. They did get the money back as the scammer had not moved the money out of the account. Better procedures and practices were put into place for the future, i.e. getting a signature before such changes. The email looked as though it did come from an internal mail and from the CEO. The mail system was also changed so that any emails coming outside the school network were clearly marked with 'EXTERNAL' and an orange header.
- server was hacked because a head teacher was using the username head and password Password for logging in remotely. Ransomware was then installed on the server. Thousands of pounds of damage done even though only 7 files were encrypted before systems on the server were able to stop it.

Also check our news for latest cyber reports etc: <https://dataprotection.education/news-top/news>

Essentially it is about protecting data for all data subjects but more recently that also means being vigilant around cyber security to prevent data breaches.

I have attached some slides from one of our presentations that might be useful. Another source of information for any training would be our own courses on the Knowledge Bank, often people run through these and do contain examples: <https://dataprotection.education/courses-heading/courses>

Anyway hope that helps and was what you were looking for?

Many thanks,
Tammy

Thanks so much for this Tammy. I was wondering if you'd managed to ask your colleagues about some good examples we could use for scenarios to highlight the importance of GDPR. The what if type scenarios?? Many thanks

Subject: Downs Special School follow up information

Hi Abi

Following the walkaround and our follow up meeting I said that I would speak to my colleagues to see if there were any other suggestions about the folders in the reception area. The suggestions are as follows:

- Put the folders in the admin office - from what I have seen this is probably not a practical solution for you as it would likely cause more work for any admin staff in the office.
- Use hanging wall files that are covered (we see this a lot), but away from the exit door in an area still accessible for staff when leaving
- The above should be an interim solution with a view to moving to an electronic system
- Another suggestion is whether they can be stored in the classroom in a covered folder as this would provide an extra step of protection? This means that all the folders would then not all be together in one area for someone to access.

Hopefully one of the suggestions might be something that you can consider.

Many thanks,

Tammy Buchanan
