

Reminders, end of year routines and planning

Reminders for key contacts and logging SARS/breaches and requests

Any staff member with data protection responsibilities, or existing staff who would like a refresher for making best use of the resources available on the DPE knowledge bank, can email: **kalina.voyvodova@dataprotection.education** who will arrange a tour with.

For SARS and data breaches/FOIs these should always be logged on the SAR and breach log and a member of the team will get back to you and/or update the log with actions to complete.

As the DPE ticket system is continuously monitored and tickets logged, and because consultants can be in school, or on leave, for data protection queries and queries related to SARS and data breaches please use the DPO@ email: **dpo@dataprotection.education**

DPE Keep in the know digest email

DPE has automated sending key information and updates to you. You should be receiving the latest DPE news via a digest email (Keep in the know! With data protection education). If you have not received an email by the 1st May, please email:

dpo@dataprotection.education with the email address to be used and this will be checked and set up for you.

Ideally the admin user and head teacher should be receiving the digest email. Content will include for example: Knowledge bank updates, latest issues and risks to be aware of, and support available to you.

End of year routines and planning

Consent refresh

Review your current consent with the latest DPE documents to ensure you are happy that documents are up to date. The latest consent documents can be located in the DPE compliance best practice area [here](#).

Staff training and induction for new staff

If it has been more than 2 years since training was completed. Staff should be set up to complete the DPE **GDPR refresh and if not completed already, the Stay Safe Online NCSC training**. It is worth thinking about planning for this now, in line with next years INSET days.

GDPR and cyber security training should also form part of the **induction process for new staff**.

You can also check on training completion status and send a **to-do** email to staff to complete training [here](#).

Third party lists

Check that your supplier third party list is up to date and remove suppliers no longer used. DPE continues to work on completing generic supplier/third party lists that can be selected from the DPE dashboard and used for maintaining your third parties/suppliers. More information can be found [here](#)

Continue to develop a data retention schedule/routines

As you get towards the end of term it is worth reviewing your retention documents and processes for checking and securely destroying data that has reached its retention schedule timeline. For example:

- Updating website photos
- School displays
- Online systems

If you have not got a data retention schedule check out the [records management best practice area](#) Either the IRMS or the DfE checklist can be used as a working document to support data retention in school. As organisations move more towards Cloud based solutions it is worth reviewing systems and processes in place for ensuring data retention guidelines can be adhered to within your electronic systems.

Staff leavers tasks to consider

- Update HR records and check leaver records against your retention schedule
- Ensure any keys, key fobs and passes are collected
- Collect any devices such as laptops, iPads and mobile phones and arrange for the device to be wiped for the next member of staff. View the [Information Security](#) area on the Knowledgebank for policies and advice:
<https://dataprotection.education/index.php/best-practice-library/best-practice/information-security>
- Remove the member of staff from any systems, email and network
- If they hold an email alias such as office@ ensure this is pointed to another member of staff
- If USB's are allowed, ensure they are collected

Student leavers tasks to consider

- Run data cleansing and end of year routines for your MIS and check against your retention schedules
- Check online systems and encourage staff to self regulate and tidy online folders and data, deleting information no longer needed
- Check physical folders for outdated information
- Remove displays and check the process in place for removing photos of leavers from the school website etc

School Building tasks to consider

Ensure laptops and iPads are locked away.

Ensure there is no data left out such as class lists, medical information, folders or confidential waste. Schools are often deep cleaned or have building works completed during the holidays so there could be external visitors to areas where visitors would not normally be allowed.

Remember if the door codes were given out to contractors during the holidays to reset them again in the new term.

Ensure cupboards are locked. View the clean desk policy on the Knowledgebank: <https://dataprotection.education/index.php/best-practice-library/best-practice/clear-desk>

Ensure offices are locked.

Ensure there is no data left in public areas such as class registers, allergy and medical lists.

Ensure that those lists that are no longer required are destroyed using the recommended destruction methods: <https://ico.org.uk/for-organisations/sme-web-hub/whats-new/blogs/practical-methods-for-destroying-documents-that-are-no-longer-needed/>

If any children have left at the end of term, ensure their data is removed from the classrooms.

Ensure there are appropriate agreements in place for staff taking devices or data home

If staff are working over the holidays ensure there is an appropriate policy in place : <https://dataprotection.education/index.php/best-practice-library/best-practice/working-out-of-school>

Other

Check office emails to ensure there has not been a last minute [subject access request](#) (SAR)

Turn off any unused devices/equipment as a further step to protect any data on it – and also to save the planet!

Holidays are the prime time for physical break ins to premises and for [hackers](#) to break into the server/network. Ensure all physical buildings are locked and secured. Ensure the server is locked away with adequate [cyber security](#) controls in place.
