

School: Drayton CofE Junior School

Date: 19/06/23

DPE consultant: Stuart Lee (SL) **School:** Marguerite Franklin (MF) - business manager. Clare Hughs (CF) - business administrator - attended the demo of the website.

Introduction

An onsite visit took place on the 19th of June 2023. Part of the visit time included giving a demonstration of the DPE website (SAR/breach logs etc) for CH who will be supporting MF with compliance actions in the future.

A physical audit walk was then completed. A physical audit is useful in supporting the school with physical data risks and remedial actions. The walk is also useful in identifying how practice aligns with policy/procedural documentation.

The school has a data protection section on the school website that will require updating with the latest compliance documents. SL will support this process for the Autumn term 2023. If no data protection/cyber security training has been completed in the last 1-2 years, it is recommended that this is completed. The school can use DPEs e-learning modules to complete the training, or complete as part of whole school INSET.

The following documents/best practice areas on the DPE website can be used to reference against and to obtain additional resources detailed in the report:

- [DPE compliance documents/consent guidance](#)
- [DPE quick reference guide](#)
- [Records management best practice](#)
- [Information and cyber security](#)
- [Clear Desk Best Practice Library](#)
- [Photo and video guidelines](#)
- [DPE Quick Reference Guide](#)

Links to other relevant guidance are also detailed in the report.

Audit walk observations and recommendations

The DPE making the rounds app was used to complete the walk. Details for all areas audited can be accessed from the DPE website: My Activities> Making the Rounds. Supporting text for each area and best practice text can be located [here](#)

The report gives details from observations regarding how sensitive data is stored in, admin/finance offices, classrooms, SENCO office(s) and corridors, with server/comms location observation. Consent is obtained for any displays that contain a photo and name.

Observations including how other settings have changed practice with recommendations are detailed below:

Visitor sign in system

Recommendations: Add the following statement to the electronic/paper sign in system: Visitor information is collected for health and safety, record of official visits and safeguarding. If you would like to know more, the general/visitors privacy notice is available on the school website, or you can ask at reception for a paper copy.

For paper visitor sign-in systems the statement can be added to the visitor book front cover or displayed near to the visitor sign-in area.

Note: the school will be moving to an electronic system and will inform the DPO prior.

Review [Article: Visitor Books and Electronic Entry Systems](#)

External security (doors)

It was noted that some external doors were wedged open, and the site was easily accessible as the school gate was also open. In one classroom the laptop was also unlocked with a door wedged open and the classroom easily accessible.

Recommendations: Review end of day routines and physical security of the classrooms and premises. Remind staff to lock laptops when not in their work area. **Review** [Physical Security Policy](#)

Admin office

Care plans are kept in the front office (covered) and the student contact folder is stored on the shelf. The office has an additional internal area that is double locked for additional security. Doors are locked at 6 pm.

Recommendations: The school will continue to review and move to a folder/online system if needed in the future.

Finance office

Lack of secure storage meant that 1 x folder with sensitive staff financial information was easily accessible.

Recommendations: Staff finance folder to be moved to a secure cabinet/cupboard. Lack of secure storage - **recommend a tambour style cabinet is obtained.**

Review [Physical Security Policy](#)

IT server area

Server and comms unit was easily accessible, and the cabinet was not locked.

Recommendations: Discuss with IT provider in relation to the NCC thematic audit 2022. Document risks and mitigations. Lock comms unit when not in use.

Review [Physical Security Policy](#)

Review [Information & Cyber Security Best Practice](#)

Printers/photocopiers

Admin, DH and HT have secure photocopier codes but not teaching staff at present.

Recommendations: Review and document any risks where secure codes are not present. Raise staff awareness to reduce risks of sensitive data being left on the photocopier(s).

Guidance: [Review Article: Using PIN codes on printers](#)

Classrooms

Some sensitive data was observed; student folders; assessment/intervention and dietary information. It was ascertained during the walk that there was not a consistent system, and the information was in various locations and easily accessible. Debate took place with MF regarding improving the system being used, for example, how would supply staff know where to locate the folder? How do you ensure adequate security of the folders etc?

Unlocked laptops with applications open.

1 x cupboard with keys left in it and SL was able to access a hospital letter.

Some lists had full names with additional information which was on general display.

Some desks/classroom areas would also benefit from a declutter.

Recommendations:

- Consider additional training and raise awareness with staff.
- Unlocked laptops/desktops: Remind staff to lock laptops/desktops when not in their work area. Consider an auto timeout to lock laptops/desktops after a set time.
- Folders with sensitive information: Could you move to an electronic system and have minimised key information available for each class teacher? Could you use a folder system with minimised data that is handed out each day (meaning supply staff will get this information) and returned to the school office at the end of the day. The school could then gradually move over to staff accessing key information electronically with a master folder kept securely in the main admin office. This would reduce the amount of information needed for each classroom and make it easier to maintain the system. If keeping to the current system, build in routines to maintain the folders and raise staff awareness regarding storing securely at the end of the school day. **School to review.**
- As we are approaching the end of year, reminder to staff regarding lists and displays; remind staff to complete a data cleanse of physical and electronic folders, desks and work areas (clear desk policy).

DSL office

Interventions and SENCO files were easily accessible. There is a standalone printer to ensure security of sensitive printing. The office has secure access and is locked at night. The school should however be aware of who else has access and can potentially view this information (cleaners, caretakers, students, contractors etc).

Recommendations:

- Review the display of the intervention information and consider adding to a folder system.
- The office is shared and has very limited secure storage. Due to the office containing a lot of sensitive information the school should consider adding additional secure storage. For example, a tambour style cabinet that can remain open whilst the staff members are working and then locked at the end of the school day.
