Hi Tony/Claire,

I hope you are well and managed to get some time off before everyone returns to school this week. Given that the school has been a victim of a cyber attack and we are not 100% sure of where it originated, plus the added complexity of the prom incident around the emails, I would recommend implementing the NCSC suspicious email reporting service which is automatically notified when your users report a phishing email. It is a free public service, there is a description of how it works in this article:

<https://www.secrp.police.uk/post/phishy-emails-on-phishyfriday>

Claire, this might be something worth considering for the whole Trust given as I mentioned previously the hackers will not distinguish that Brighton Hill was not part of the trust initially, and some kind of phishing either via the trust or one of your suppliers was successful, a raising of awareness amongst staff like this could be helpful. It will be particularly useful where your schools are part of the same tenancy where blocking for one school may block for all schools.

This type of O365 license does not apply to home licenses nor student licenses, but should cover your staff with the licenses the schools should have.

Many thanks,

Tammy Buchanan
