Hi Clark,

Thanks for your time today. It was very much appreciated. Please find below the details that we discussed:

Data Retention: reminder that data retention/records management is also about staff network files, Office 365 files and photos. You confirmed that email retention of one year has been implemented, but some of the other systems should be reviewed, such as network files, O365 accounts. You are going to check that if information has been input into something like CPOMs that any paper versions are then destroyed as they are no longer needed. We discussed the process for adding information onto the school websites, and we highlighted that there is no apparent responsibility for removing data from the school websites such as photos of children that have left the school. You confirmed that the one-one iPads are regularly checked.

Cyber security: staff have done the National College cyber security training. I advised you to check our news page as we frequently have cyber information specifically for schools (including cyber attacks on schools which are on the increase): <https://dataprotection.education/news-top/news>

You confirmed that MFA has been implemented throughout the trust which is the best step for helping to prevent a cyber attack. We discussed that student accounts have been the 'way in' for hackers for other school cyber attacks - you advised that you have a process for only allowing student accounts for a short time period to allow email usage for the curriculum for certain year groups.

We discussed account spoofing and phishing attacks - we do offer phishing simulation as part of our service at no extra charge, so may be something the trust might consider for some staff members: <https://dataprotection.education/best-practice-library/documents/user-guides/147-phishing-simulation-guide>

You annually do penetration testing of the network.

The trust has implemented a cyber plan.

I advised having a look at our Information/Cyber security checklist from a trust point of view, as this may highlight any areas that may need attention from a cyber security perspective, and is also useful data for a data protection trust report. That can be found here:

<https://dataprotection.education/component/tjucm/itemform/cyber-security>

Have a good rest of the week.

Many thanks,

Tammy Buchanan
